

*"Telepresence is an experience based on videoconferencing in which remote session participants appear to be located in the same room and sitting on the other side of the conference room table"*

*Wainhouse Research*

Videopresence is a High Definition (HD) videoconferencing solution created by Videonations. Based on the same principles as telepresence, Videopresence is a high quality, cost effective solution that runs over the Internet. This offering - which is currently unrivalled in the marketplace - is aimed at businesses wishing to significantly minimise travel, improve communications and reduce their carbon footprint.

### Key Benefits

#### HD quality with low running costs

Most telepresence solutions demand an expensive, high bandwidth QoS (Quality of Service) network. Videopresence is different; it delivers true HD over the raw Internet.

#### Designed around you

A traditional telepresence suite tends to be an 'off the shelf' package that requires a large expanse of space. A Videopresence suite can be designed around your corporate identity and integrated into a workspace as compact as 4.5 x 4.5 m sq.

## Ease of use

We recognise that there's a need with higher-end solutions for intuitive, hassle-free meetings where participants require minimal or no training. Videopresence couldn't be simpler to operate via an embedded touch screen.

Alternatively, meetings can be controlled remotely as part of a fully managed service.

## Faster return on investment

Due to its unique architecture, Videopresence is more competitively priced than other telepresence solutions. With solutions starting from £2,925 per month, why not contact us to book your Videopresence experience today?

If you require a quote or further information on Videopresence, please call **0845 084 3007** or email [experience@videonations.com](mailto:experience@videonations.com).

Don't forget, we have an array of HD videoconferencing and integrated audio visual solutions for rooms of all sizes as well as for remote working requirements. Contact us for further information.

## Key Features

- HD modes – 1080p & all resolutions below
- Bandwidth efficiency – true HD delivered at 6 Mb and above
- Based on ITU standards ensuring interoperability with any VC system
- 4-way HD multipresence capability
- Embedded touch control or available as a fully managed service
- Can be designed around corporate colours & furnishings
- Can integrate into a space as small as 4.5 x 4.5 m sq.
- Video displays – from 52" or greater LCD displays
- Content displayed at full resolution and frame rate

## Three applications rolled into one

Multi-application solutions ensure optimal usage and a quicker return on investment. At the touch of a button, Videopresence transforms from telepresence mode to HD videoconferencing mode or to multipresence (multi site experience) mode.

- Videoconferencing mode - allows interaction & data sharing with any standards-based system located anywhere in the world
- Multipresence mode - enables interaction with up to 3 other Videopresence suites or a mix and match of stand alone systems
